

BEautomated WORLDWIDE

OSLAH: The Local AI **Sovereignty Hub**

Revolutionizing Enterprise Intelligence through 100% Data Privacy,
Hybrid LLM Architectures, and Zero-Latency Local Infrastructure.

| The Crisis of Data Sovereignty

The Cloud Vulnerability

- **Data Leakage Risks:** Corporate secrets are ingested by public LLMs, exposing IP to competitors.
- **Compliance Deadlocks:** BFSI and Healthcare sectors struggle with GDPR and HIPAA mandates in Cloud AI.
- **Hidden Costs:** Skyrocketing API token costs make large-scale deployment economically unviable.

| The Local-First Paradigm

100% Privacy

Zero external network dependency. Your data stays in your hardware, always.

Zero Latency

On-premise execution removes network lag, providing sub-second inference speed.

Zero Token Cost

Utilize local GPU/CPU cycles. Pay once for hardware and electricity, not per word.

| The \$150Bn Private Intelligence Market

Projected Global LLM Market reaching exponential growth by 2030, driven aggressively by private enterprise adoption and security compliances.

| Product Core & Tech Stack

The Unified Intelligence Hub

OSLAH is a cross-platform (Windows/macOS) dashboard that bridges the gap between complex LLM engines and non-technical business users.

Our obsidian-themed interface provides real-time hardware monitoring, multi-model selection (DeepSeek/Llama), and enterprise-grade security logs in a single executable.

Frontend
Flutter Desktop UI

Backend
Ollama Local Engine

Persistence
Encrypted SQLite

RAG Engine
Proprietary Chunking

Enterprise Multi-User Server Architecture

70% Infrastructure Savings

The Enterprise Server Logic

- **Single Host Mode:** One high-GPU machine (or DGX Spark setup) serves the entire office network flawlessly.
- **Shared Queue:** Concurrent incoming requests are handled sequentially via the OSLAH Queue Manager.
- **Zero Client Install:** Remote employees connect instantly via their web browsers or lightweight endpoints to the central hub.

| The Agentic Ecosystem

DeepSeek-R1 vs. Llama 3.1: Tailoring dedicated intelligence workflows for every department.

HR Agent

Automated resume screening, match scoring, and completely local onboarding assistance.

Finance Agent

Local processing of private tax records, expense analytics, and secure corporate financial audits.

IT Agent

On-premise technical documentation parsing, repository search, and secure code generation.

| The Open-Core Strategy & Roadmap

Monetization Map

- **Community Edition:** Free open-source core to drive massive global developer adoption and studio branding.
- **Enterprise Pro:** Premium license for Multi-user LAN access and RBAC governance control panels.
- **Agent Store:** One-time payments for pre-trained specialist business intelligence modules.

Release Lifecycle

- v1.0 (Q3 2026):** MVP Launch: Core Obsidian UI, Ollama Engine Sync.
- v1.5 (Q4 2026):** Networking: Local Server API, Multi-User Dashboard, RBAC.
- v2.0 (Q1 2027):** Vector RAG: Hybrid semantic search and agent marketplace.

Questions & Answers

Thank you for your attention. Let's redefine local intelligence together.
